---

Anne, We have two Superfund sites going final soon. **One in LA and one in OK.**

Secretary Teague has proposed taking you by Eagle Industries during your visit next week. It has been subject to a fair amount of media interest lately. According to reports, the company may have contaminated other properties in the area that are now owned by the city. Also, questions about the site's impact on nearby development. I will send you some articles to read in a separate email.

David

**From:** Breen, Barry

Dear Colleagues,

Attached is a draft two-pager, summarizing current plans to complete the next proposed NPL package (10 sites) and the next final NPL package (4 sites). The target for signature is the week of January 8 – 12, 2018.

Thank you to the many headquarters offices and regions who have been working on these plans with us. Sites in Regions 3, 4, 5, 6, and 9 are included in these packages.

Five items of context to note:

- (1) For the four sites in the final NPL package, we proposed these four in our Summer 2017 proposed NPL package. During the public comment period, no adverse comment was received on any of these four sites.
- (2) OMB's budget office reviews draft and final NPL packages. OMB has now concurred on these packages.
- (3) For each site in both packages (so, 14 sites total), a state letter of support is in hand. These state letters of support are all collated and attached to this email.
- (4) A communications plan for both packages is currently being developed in coordination with OPA and OCIR, covering public and congressional notifications.
- (5) In two cases (listing the Mississippi Phosphates site, and proposing the Orange County North Basin site), these actions are identified as milestones in our December 8, 2017, list of 21 Superfund sites targeted for immediate, intense attention.

If you have comments or edits on the two-pager and the completion plans it reflects, would you let us know by next Thursday (Dec. 28)?

Barry
